

The Danish Childhood Vaccination Schedule

	DTaP ¹	Hib ¹	IPV ¹	MMR ²	dTaP
3 months	Yes	Yes	Yes		
5 months	Yes	Yes	Yes		
12 months	Yes	Yes	Yes		
15 months				Yes	
5 years			Yes ³		Yes ³
12 years				Yes	

The Danish Childhood Vaccination Schedule as on 5 December 2006

DTaP and IPV are given with Hib in one injection.

MMR vaccination as a pre-travel vaccine: MMR vaccination can be performed down to the age of 9 months in cases of children visiting measles-endemic countries and areas where measles outbreaks are known to occur. The two dose vaccination schedule at 15 months and 12 years should however, be repeated in cases of children under 12 months of age. Those aged between 12 months and 15 months need only a second MMR dose at 12 years.

dTaP and IPV are given in one injection.

This summary chart is adapted from the national vaccination schedule for Denmark, recommended by the Danish National Board of Health. More information on the childhood vaccination schedule in Denmark may be accessed through the Statens Serum Institut website.

Generation Rescue note:

In the time that we give our children 36 vaccines (before age 6), the Danes give their children 12!!

Alternative Schedule #2: Go Danish
